

ELITE POKER COACH

THE UNIBET BLUEPRINT

A Comprehensive GTO Baseline & High-Impact Exploitative Manual
Specifically Calibrated for Ultra-Low Rake Cash Game Environments (NL4 & NL10)

Author: Elite Poker Coach International

Release Date: August 2026

Target Audience: Advanced International Cash Game Grinders

Network Core: Unibet 6-Max NL4 & NL10 (High Realization Systems)

TABLE OF CONTENTS

Chapter 1: The Mathematics of Low Rake & Equity Realization	Page 3
Chapter 2: Raise First In (RFI) Ranges (4NL vs. 10NL)	Page 5
Chapter 3: Button Calling & Flatting Strategy (IP Flatting Blueprint)	Page 7
Chapter 4: Linear & Merged 3-Betting Ranges (Exploiting Microstakes Traps)	Page 9
Chapter 5: Preflop Defense Against 3-Bets	Page 11
Chapter 6: The 4-Bet Master Class (Standard GTO vs. Exploitative Value)	Page 13
Chapter 7: Exploitative Postflop Playbook (Stations, Nits & Passive Trappers)	Page 15

CHAPTER 1: The Mathematics of Low Rake & Equity Realization

In cash games, rake is the single largest barrier to maximizing your winrate. At typical microstakes levels, such as those on standard high-rake / high-cap networks (including PokerStars and GGPoker), players are subjected to a brutal "rake trap" consisting of 4.5% to 5% rake paired with extremely high rake caps relative to the stakes. Furthermore, certain high-rake networks collect rake preflop on any pot that reaches 2.5bb or larger, even if the hand is resolved without seeing a flop. This drains significant expectation from preflop stealing and 3-betting ranges.

The Low-Rake Advantage: Unibet Poker offers a highly player-friendly rake structure at microstakes:

- **NL4 (0.02€/0.04€):** Only **2.00% Rake** with a tight cap of **€0.50**.
- **NL10 (0.05€/0.10€):** Only **3.00% Rake** with a tight cap of **€1.50**.
- **NL25 (0.10€/0.25€):** Only **3.00% Rake** with a cap of **€2.50**.
- **Preflop Policy (No Flop, No Drop):** Absolutely zero rake is charged on any pot resolved preflop, preserving 100% of your preflop blind-stealing equity.

Mathematical Impact on Equity Realization (EqR): When rake is minimized and caps are strictly controlled, your postflop EqR rises dramatically. In high-rake games, marginal speculative hands (small pocket pairs, low suited connectors) must be folded preflop because the rake eats the entirety of their narrow postflop profit margins. In Unibet's low-rake environment, these boundary hands cross the threshold into highly profitable, positive EV status.

Microstakes Rake Structure Comparison (6-Max Hold'em)

Stakes / Blind Level	High-Rake Networks Rake %	High-Rake Cap	Unibet Rake %	Unibet Cap	Preflop Rake Charged?
NL4 (0.02€ / 0.04€)	5.00%	\$1.00	2.00%	€0.50	No (Standard Sites) / Yes (GG)
NL10 (0.05€ / 0.10€)	4.50% - 5.00%	\$0.75 - \$1.00	3.00%	€1.50	No (Standard Sites) / Yes (GG)
NL25 (0.10€ / 0.25€)	4.50%	\$1.50 - \$2.00	3.00%	€2.50	No (Standard Sites) / Yes (GG)

CHAPTER 2: Raise First In (RFI) Ranges (4NL vs. 10NL)

A standard opening raise size of **2.5x** (€0.10 at 10NL / €0.10 at 4NL) is recommended from all positions except the Small Blind, where we open to **3x** to mitigate the Big Blind's positional advantage. On the Button, you can scale your opening size down to **2x - 2.25x** to exploit opponents who overfold preflop. Due to the massive increase in implied odds, **small pocket pairs (22-55) are opened pure** from all positions.

1. Unibet 4NL (0.02€/0.04€) Opening Ranges (~2% Rake, €0.50 Cap)

Position	GTO RFI Frequency	Specific Hand Range Composition (Pure)	Strategic Adjustment
Lojack (LJ)	19.0%	22+, A2s+, K9s+, Q9s+, JTs, T9s, 98s, 87s, ATo+, KJo+	Open all pocket pairs for implied odds; set-mining is pure EV.
Hijack (HJ)	24.0%	22+, A2s+, K5s+, Q9s+, J9s+, T8s+, 98s-54s, A9o+, KTo+, QTo+, JTo	Widen with high-playability suited connectors that easily float flops.
Cutoff (CO)	32.0%	22+, A2s+, K3s+, Q8s+, J8s+, T8s+, 97s+, 87s-43s, A8o+, K9o+, QTo+	Target blind pools aggressively; drop junk offsuit broadways.
Button (BTN)	48.0%	22+, A2s+, K2s+, Q2s+, J4s+, T5s+, 96s+, 86s+, A2o+, K5o+, Q9o+, J9o+	Slightly size down to 2x-2.25x. Heavily exploit loose overfolders in blinds.
Small Blind (SB)	62.0% (VPIP)	Raise Range (24%): 77+, A8o+, A5s+, Strong Broadways. Limp Range (38%): 22-66, spekulatives, slowplays (AA/KK mix).	Highly complex limp/raise strategy is recommended due to cheap preflop odds.

2. Unibet 10NL (0.05€/0.10€) Opening Ranges (~3% Rake, €1.50 Cap)

At 10NL, the meta shifts slightly as regular opponents 3-bet wider. Our baseline remains robust but focuses on tighter range construction in early positions to dodge OOP 3-bet pressure.

Position	GTO RFI Frequency	Specific Hand Range Composition (Pure)	Strategic Adjustment
Lojack (LJ)	18.5%	22+, A2s+, K9s+, Q9s+, JTs, T9s, 98s, ATo+, KJo+	Slightly tighter suited connector defense; keep pocket pairs pure.
Hijack (HJ)	23.0%	22+, A2s+, K6s+, Q9s+, J9s+, T8s+, 98s-65s, A9o+, KTo+, QTo+	Maintain high suited Broadway dominance to fight standard 3-bet blocks.

Position	GTO RFI Frequency	Specific Hand Range Composition (Pure)	Strategic Adjustment
Cutoff (CO)	30.0%	22+, A2s+, K4s+, Q8s+, J8s+, T8s+, 97s+, 87s-54s, A8o+, K9o+, QTo+	Highly standard GTO cutoff. Play aggressively in position postflop.
Button (BTN)	45.0%	22+, A2s+, K2s+, Q2s+, J4s+, T5s+, 96s+, 86s+, A5o+, K7o+, Q9o+	Widen dramatically; exploit tight defensive blinds with high-card block values.
Small Blind (SB)	36.0%	Standard 3x Raise or Fold: 22+, A2s+, K2s+, Q5s+, J7s+, A8o+, KTo+	Simpler 'Raise or Fold' style avoids playing out-of-position limped pots.

CHAPTER 3: Button Calling & Flatting Strategy (IP Flatting Blueprint)

A classic, yet outdated piece of high-rake poker wisdom states: *"You must never flat call preflop from late position; play a strict 3-bet or fold strategy."* While this is mathematically sound in a GGPoker or PokerStars environment due to hefty postflop rake and preflop rake caps, it is a ****colossal mistake**** to apply this logic on Unibet. Because Unibet features a microscopic rake rate postflop and zero preflop rake, your postflop ****Equity Realization (EqR)**** increases dramatically. You should aggressively develop a flat-calling range on the Button (BTN) to exploit preflop openers, realizing your positional advantage cheaply.

Opponent Position	Flat-Calling Frequency	Specific Flat-Calling Range Composition	Postflop Tactical Plan
vs. LJ / UTG Open	11.0% - 12.0%	Pocket Pairs: 22-TT (Pure set-mining). Suited Aces: A2s-AJs. Suited Broadways: KQs, KJs, KTs, QJs, QTs, JTs. Suited Connectors: T9s, 98s, 87s.	Float high-frequency on flop. Use position to steal on capped turn/river checking lines.
vs. HJ Open	13.0% - 14.0%	Pocket Pairs: 22-TT. Suited Aces: A2s-AQs. Suited Broadways: KQs, KJs, KTs, QJs, QTs, JTs, Q9s, J9s. Suited Connectors: T9s, 98s, 87s, 76s.	Increase suited connector calling. Call with high cards and trap on blank boards.
vs. CO Open	16.0% - 18.0%	Pocket Pairs: 22-99 (3-bet TT-JJ for value). Suited Aces: A2s-AQs. Suited Broadways/Kings: KQs, KJs, KTs, K9s, QJs, QTs, JTs, Q9s, J9s, T8s. Suited Connectors: T9s, 98s, 87s, 76s, 65s, 54s. Offsuit Broadways: AQo, AJo.	Call with dominating hands (AQo/AJo) that crush the CO's wide, weak steal attempts.

Squeeze Defending Rules on BTN: If you flat call on the BTN, and one of the blinds squeezes (3-bets), you must strictly set-mine with pocket pairs (22-JJ) only if the following parameters are met: 1) Stacks are 100bb+, and 2) The squeezer is not an ultra-tight "Nit" utilizing a massive squeeze size (e.g. 14bb+). Fold all standard suited connectors to large squeezes as their EqR drops significantly OOP.

CHAPTER 4: Linear & Merged 3-Betting Ranges (Exploiting Microstakes Traps)

The gennemsnitlige (average) microstakes player on Unibet opens too tight preflop but commits a massive strategic blunder: **they call too wide when facing a 3-bet and under-4-bet dramatically** (e.g., 4-betting only 15% instead of the teoretiske 20%). Because there is very little preflop Fold Equity, playing a highly polarized 3-betting range with weak blocker-bluffs (such as A5s-A2s, AJo, or KQo) is a losing strategy. Instead, you must shift your 3-betting ranges to a **Linear / Merged structure**.

Linear vs. Polarized Shift: Stop 3-betting marginal blockers like A3s, A4s, A7s, A8s, AJo, and KQo. Because standard opponents rarely 4-bet, your preflop blockers lose their primary function. Instead, 3-bet high-equity, highly playable suited broadways and suited connectors (e.g., JTs, QTs, 98s, 87s) at a 100% frequency. These hands play beautifully postflop, allowing you to easily draw and stack opponents who call too wide with dominated offsuit hands.

The Two Golden 'Exploit Spots' (High-Frequency 3-Betting)

Spot Description	GTO Frequency	Exploitative Frequency	Range Adjustments & Hands to Add
Big Blind vs. Button Open	13.0% - 14.0%	18.0% - 22.0%	Button openers raise too wide and under-4-bet (frequently only ~10%). Take all 'mixed' GTO hands (A2s-A5s, KJs, KTs, QJs, JTs, AJo, KQo, 87s, 76s) and 3-bet them with a 100% frequency.
Big Blind vs. Small Blind Open	19.0%	20.0% - 25.0%	Small Blind players limping or opening small are extremely vulnerable to in-position aggression. Punish them by re-raising broad, suited broadways, suited connectors, and all suited aces.

CHAPTER 5: Preflop Defense Against 3-Bets

When you open preflop and face a 3-bet from an aggressive player behind you, the low-rake structure of Unibet allows you to defend much wider in position (IP), while forcing you to maintain tight, disciplined folding parameters out of position (OOP). Offsuit broadways (like AQo, AJo, KJo) must be folded OOP without hesitation, as they suffer from reverse implied odds and are classic "rake traps."

Preflop Defense Table: Button (BTN) vs. Blinds (SB/BB) 3-Bet (IP)

This is your baseline defense table when opening to 2.5bb on the BTN and facing a 10bb re-raise from the SB or BB.

Hand Category	Call IP Frequency (49%)	4-Bet Value Frequency (6%)	4-Bet Bluff Frequency (3%)	Pure Fold Frequency (42%)
Aces (Ax)	AQs, AJs, ATs, A9s-A6s, AQo	AKs, AKo, AA (mix call)	A5s-A2s (GTO standard bluffs)	A9o-A2o, ATo, AJo
Kings (Kx)	KQs, KJs, KTs	KK	K5s-K2s (light blockers)	K9s-K6s, KQo-KTo, KJo
Queens (Qx)	QJs, QTs	QQ (mix call)	Q9s (mix)	Q8s-, QJo-QTo
Jacks & Tens	JTs, T9s	JJ, TT (mix call)	None	J9s-, T8s-, JTo, T9o
Pocket Pairs	22-JJ (Pure call for implied odds)	QQ+ (mix)	None	None (All call IP)
Suited Connectors	98s, 87s, 76s, 65s, 54s	None	97s, 86s (mix)	All offsuit connectors

Out-of-Position (OOP) Defense Adjustments:

- **Cutoff vs. Button:** Pocket pairs below 77 must be folded pure. Fold AQo. 4-bet QQ+, AK (value) and KJs (bluffs).
- **Lojack / UTG vs. Blinds:** Play extremely tight. Fold all pocket pairs below 99 OOP. Only call with 99-JJ, AQs, AJs, KQs. 4-bet KK+, AK (value) and A5s (bluffs).

CHAPTER 6: The 4-Bet Master Class (Standard GTO vs. Exploitative Value)

Preflop 4-betting on Unibet requires deep tactical adjustments based on whether you are playing at the 10NL or 4NL tables. Because microstakes players deviate heavily from optimal GTO frequencies, your 4-bet range must shift from a balanced, polarized style to a pure linear value strategy as you descend in stakes.

1. Standard 4-Bet Sizings (100BB Effective Stack)

- **In Position (IP):** 4-bet to **22bb – 23bb** (e.g., BTN vs. Blinds 10bb 3-bet).
- **Out of Position (OOP):** 4-bet to **24bb – 26bb** to neutralize the caller's postflop advantage.
- **Exploitative Sizing (vs. Calling Stations):** Squeeze the size up to **25bb – 28bb** with premium pocket pairs; they are calling preflop regardless of sizing, so maximize value.

2. 10NL Strategy: The Polarized GTO Approach

Against competent regular opponents ('Regs') who 3-bet wider than 8.5%, play a polarized range to prevent counter-exploitation. Your value portion consists of KK+ and AK, while your bluffs are constructed using pocket wheel-aces (A5s-A2s) as blocker-bluffs. Wheel-aces contain an Ace blocker to reduce their AA/AK combinations, while maintaining excellent straight and flush equity postflop if called.

3. 4NL Strategy: The Linear Value Strategy

📌 **Non-Negotiable 4NL Rule: NEVER 4-bet bluff on 4NL!** At 4NL, the average population only 3-bets premium hands, but once they do 3-bet, they will almost never fold to a 4-bet. They play extremely "sticky" as classic Calling Stations. Attempting to 4-bet bluff with A5s is a massive, self-inflicted leak. Instead, play a 100% linear value 4-bet range: **TT+, AQs+, AKo**. Size your raises large, and value-bet postflop relentlessly.

CHAPTER 7: Exploitative Postflop Playbook (Stations, Nits & Passive Trappers)

Unibet microstakes tables are filled with diverse player archetypes. Because postflop rake is low, actively deviating from GTO baselines to exploit their systematic postflop imbalances is your primary source of profit.

1. Crushing 'Calling Stations' (VPIP 35+ / PFR < 10%)

- **Relentless Thin Value:** Lower your threshold for value-betting. Fire three street barrels with top pair weak kicker (A7o on A-8-3-2-6) or middle pairs; they will call you down with bottom pairs and Ace-high.
- **Small Sizing Early:** Bet small (25% to 40% pot) on the flop and turn. This keeps their wide, weak calling range in the pot, letting you extract thin value from the very bottom of their holdings.
- **River Bluffs with Trash Only:** Since they call too wide on the flop/turn, they arrive at the river with a massive concentration of missed draws. You can comfortably bluff-shove on the river with your worst trash (zero showdown value) to fold out their missed draws.
- **Avoid 'Value-Owning' Yourself:** Stations love to passively slowplay ('trap') sets and two-pairs. If an otherwise passive station suddenly check-raises you or bets large on later streets, fold immediately—they always have a monster.

2. Crushing 'Nits' (VPIP < 15% / PFR < 10%)

- **Steal Blinds Relentlessly:** Nits overfold preflop massively. If they sit behind you in the blinds, open 100% of your hands to a tiny 2x sizing; it prints immediate preflop EV.
- **High-Frequency Small C-bets:** Nits play 'fit-or-fold' postflop. C-bet 100% of your range for a small 25% pot sizing on almost any flop texture. If they call, shut down your bluffs immediately.
- **Overfold to Their Aggression:** Nits never bluff. If they raise you postflop, fold hands as strong as top-pair or overpairs (including AA) without hesitation.

3. Countering the 'Passive Station with Slowplays'

The Trapper Profile: These players play a wide range (VPIP 30+) but have a tiny 3-bet frequency (under 4%). They passively 'flat' preflop with premium hands like AQo, AJo, TT-QQ, or AA instead of 3-betting them.

- **The Preflop Counter:** Squeeze and isolate them with large preflop raises (3.5x - 4x) to punish their weak, limp-heavy ranges.

- **The Postflop Counter:** C-bet small (25% pot) on dry boards to exploit their passivity. However, on Ace-high or King-high boards, be careful of 'thin value-betting' after they call your flop bet, as their flatting range is heavily weighted towards strong, slowplayed top pairs. Slow down on turn/river bricks.
